Subject: A few things for you

Robert:

Following up on our nice conversation of Friday,

You should receive your Zoom invitation in a separate email.

Attached are a few things for you:

1. Cronbach and Gleser's 1963 paper that I mentioned
2. A few more recent papers addressing the same or related issues (these are less important right now)
3. A brief paper by Chun Wang who developed the significance tests. There might be more that I don't have, and it looks like King Yiu and Joseph both worked on this at one time, so we'll have to ask them on Wednesday what they have.
4. A brief report by Joseph based on a small simulation study he did. This study used a Z test, but everything else we have done used a likelihood ratio test, which is better than the Z test.
5. Some more results from Joseph.

Lots of stuff. I hope I didn't overwhelm you. See you Wednesday!

Dave Weiss
