Subject: Re: Code for detecting patterns, levels & scatter of change?

OK, here are the associated files I could find. My old work was not organized very well, and I only looked through quickly, so please let me know if it looks like there is something missing that you need. Also, I think I originally got the code for the level, scatter, and shape tests from another student (probably King Yiu).

I would highly recommend not working on this over the summer though! Please enjoy any free time you have. :) But I'm looking forward to seeing you in today's meeting!

Best,
Joseph

> Ah sorry, I missed your email until gmail prompted me now, but I'm happy to share what I can. Did Dr. Weiss give you any more details, or did he also tell you to contact Ming? Because Ming has done more recent work in this area. I believe the only work I ended up doing toward that project was a class project back in my first year that evaluated level only. I don't think I ended up actually getting as far as scatter and pattern, but my memory isn't great. Anyway, I'll try to round up my old code to send to you.
